Quick Facts:

Over the Month and Over the Year Changes in Unemployment Rate and Job Growth

National Unemployment Rates

The November 2014 national unemployment rate of 5.5 percent (not seasonally adjusted) was unchanged from the October 2014 rate and -1.1 percentage points lower than the rate in November 2013.

The seasonally adjusted national unemployment rate in November 2014 was 5.8 percent, up 0.1 percentage points from the October 2014 rate and -1.2 percentage points lower than the November 2013 unemployment rate.

State Unemployment Rates (Seasonally Adjusted)

In November 2014, the District of Columbia had the highest unemployment rate at 7.7 percent. California, Louisiana and Mississippi recorded the second highest jobless rate at 7.2 percent each, followed by Nevada at 7.1 percent; Rhode Island at 6.9 percent; Oregon at 6.8 percent; and Georgia at 6.7 percent. North Dakota, at 2.8 percent, posted the lowest unemployment rate, followed by Nebraska at 3.1 percent, South Dakota at 3.3 percent, and Utah at 3.6 percent.

Twenty-eight states, reported over-the-month unemployment decreases, two states had rate increases, and twenty-one states including the District of Columbia had no rate change. Alaska and North Carolina recorded the largest rate decrease (0.2 percentage points each).

Compared to a year earlier, forty-seven states, including the District of Columbia, registered unemployment rate decreases, two states reported rate increases, and two states (South Carolina and Vermont) saw no rate change. Illinois reported the largest jobless rate decrease from a year earlier (-2.3 percentage points), followed by Kentucky (-2.2 percentage points), and Rhode Island (-1.9 percentage points). Sixteen other states had jobless rates at least 1.0 percentage point lower than a year earlier.

Not seasonally adjusted data

District of Columbia's Unemployment Rate

The District of Columbia's seasonally adjusted November 2014 unemployment rate was 7.7 percent, unchanged from the October 2014 rate and 0.4 percentage points lower than the rate in November 2013.

District of Columbia's Civilian Labor Force, Employment and Unemployment

Over the month, the District of Columbia's not seasonally adjusted civilian labor force increased by 1,000 to 384,200. A total of 354,900 residents were employed and 29,300 were unemployed in November 2014. The number of employed residents increased by 1,300 along with an decrease in the number of unemployed residents of 300, resulting in a 0.1 percentage point drop in the not seasonally adjusted unemployment rate.

From November 2013 to November 2014, the District's civilian labor force increased by 12,200, as the number of employed residents increased by 12,600 and the number of unemployed residents decreased by 400, resulting in an over the year 0.4 percentage point decrease in the not seasonally adjusted unemployment rate.

District of Columbia Job Growth

The not seasonally adjusted number of District wage and salary jobs increased by 2,900 (0.4 percent) from October to November 2014. The private sector gained 2,400 jobs (0.5 percent) while the public sector added 500 jobs (0.2 percent). In the private sector,

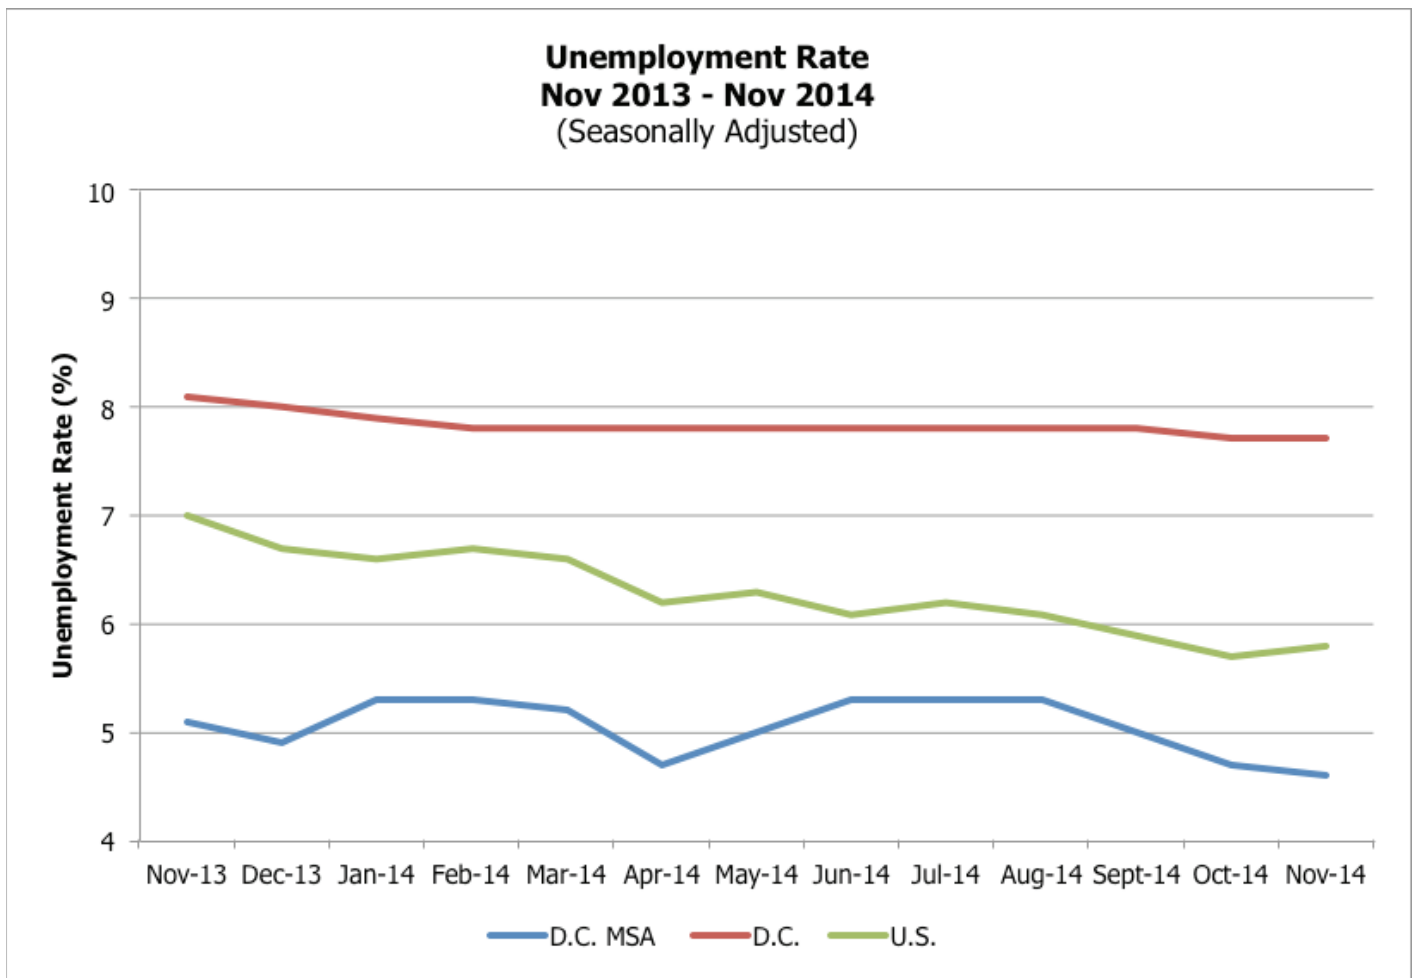

Trade, Transportation and Utilities increased by 1,000 jobs (3.2 percent), Professional and Business Services added 700 jobs (0.4 percent), Information added 100 jobs (0.6 percent), Financial Activities added 100 jobs (0.3 percent) and, Educational and Health Services added 1,800 jobs (1.4 percent). The private sectors that lost jobs included: Mining, Logging and Construction down 100 jobs (-0.7 percent), Leisure and Hospitality down 1,100 jobs (-1.5 percent), and Other Services down 100 jobs (-0.1 percent). Meanwhile, the Manufacturing sector was unchanged over the month. In the public sector, the District government and the Federal government gained 200 jobs each, while Public Transportation gained 100 jobs over the month.

In the last twelve months, the District gained a total of 9,300 jobs (1.2 percent). The private sector added 13,200 jobs (2.5 percent) and the public sector lost 3,900 jobs (-1.6 percent). The private sector growth occurred in Leisure and Hospitality (up 1,700 jobs or 2.5 percent), Professional and Business Services (up 3,800 jobs or 2.4 percent), Financial Activities (up 1,100 jobs or 3.7 percent), Trade, Transportation and Utilities (up 2,100 jobs or 6.9 percent), Educational and Health Services (up 2,500 jobs or 1.9 percent), Information (up 100 jobs or 0.6 percent), Mining, Logging and Construction (up 400 jobs or 2.8 percent), and Other Services (up 1,500 jobs or 2.2 percent). Meanwhile, Manufacturing remained unchanged over the year. In the public sector, the District government gained 1,400 jobs, and Public Transportation added 200 jobs, while the Federal government shed 5,500 jobs over the year.

Washington Metropolitan Statistical Area (MSA) Job Growth

Total wage and salary employment in the Washington Metropolitan Statistical Area increased over the month in November 2014 by 18,500 (0.7 percent). The private sector increased by 14,700 jobs (0.7 percent) while the public sector increased by 3,800 jobs (0.6 percent). Within the private sector, gains were registered in Trade, Transportation and Utilities (up 10,300 jobs or 3.2 percent), Information (up 100 jobs or 0.2 percent), Professional and Business Services (up 2,300 jobs or 0.4 percent), and Educational and Health Services (up 2,600 jobs or 0.8 percent). Losses were experienced in Leisure and Hospitality (down 500 jobs or -0.2 percent), Other Services (down 100 jobs or -0.1 percent), and Financial Activities (down 200 jobs or -0.2 percent). Meanwhile, Manufacturing had no over-the-month change. In the public sector, the Federal government gained 600 jobs, and the State government gained 1,200 jobs.

During the last twelve months, the Washington Metropolitan Statistical Area gained a total of 31,900 jobs (1.3 percent). The private sector added 31,700 jobs (1.6 percent) and the public sector gained 200 jobs. Private sector growth occurred in Leisure and Hospitality (up 9,800 jobs or 4.1 percent), Financial Activities (up 200 jobs or 0.2 percent), Trade, Transportation and Utilities (up 6,500 jobs or 2.0 percent), Educational and Health Services (up 8,600 jobs or 2.7 percent), Professional and Business Services (up 4,500 jobs or 0.8 percent), Other Services (up 1,700 jobs or 1.1 percent), and Mining, Logging and Construction (up 2,100 jobs or 1.8 percent). Losses were registered in Information (down 1,600 jobs or -2.5 percent), and Manufacturing (down 100 jobs or -0.3 percent). In the public sector, the Federal government decreased by 6,200 jobs and the State government gained 3,000 jobs.

District of Columbia, Washington Metropolitan Division, and Washington Metropolitan Area Civilian Labor Force

Washington Metropolitan Division Civilian Labor Force Employment and Unemployment Rate

The civilian labor force in the Washington Metropolitan Division decreased by 6,500 from October to November 2014, as employment decreased by 2,800 and the number unemployed decreased by 3,600. The not seasonally adjusted unemployment rate in the Washington Metropolitan Division, at 4.7 percent in November 2014, was down 0.1 percentage point from the previous month.

Over the last twelve months, the number of employed residents in the Washington Metropolitan Division rose by 28,900. Over the year, 12,700 fewer Division residents were unemployed, and the division civilian labor force rose by 16,200. The Metropolitan Division's not seasonally adjusted November 2014 unemployment rate was down 0.5 percentage points from the rate in November 2013.

Washington Metropolitan Area Civilian Labor Force Employment and Unemployment Rate

The civilian labor force in the Suburban Ring of communities surrounding the District of Columbia decreased by 9,000 from October to November 2014, as employment decreased by 4,900 and the number of unemployed residents decreased by 4,200. The not seasonally adjusted unemployment rate in the Suburban Ring, at 4.2 percent in November 2014, was down 0.1 percentage points from the prior month.

Over the year, there was an increase of 18,700 employed residents in the Suburban Ring. While there were 14,800 fewer unemployed suburban residents, the suburban civilian labor force rose by 3,900. The Suburban Ring's November unemployment rate was down 0.5 percentage points from November 2013.

For the Washington Metropolitan Statistical Area (MSA), in November 2014, the number of persons in the civilian labor force decreased by 8,000 from the previous month, the number of employed residents decreased by 3,600, and the number of unemployed residents decreased by 4,500. The MSA's unemployment rate for November 2014 was 4.6 percent, down 0.1 percentage points from the rate in October 2014. Compared to November 2013, the MSA's civilian labor force rose by 16,100. Employment increased by 31,300 and unemployment decreased by 15,200. The Washington Metropolitan Area's November 2014 not seasonally adjusted unemployment rate was down 0.5 percentage points from the November 2013 rate of 5.1 percent.

0.5%

The Washington Metropolitan Area's November 2014 not seasonally adjusted unemployment rate was down 0.5 percentage points from the November 2013 rate of 5.1 percent.

Employment Status by Demographic Groups

From November 2013 to November 2014, the civilian labor force for the white population in the District increased by 5,500, as the number of employed increased by 7,500, and the number of unemployed decreased by 2,000. The unemployment rate for whites in November 2014 was 2.9 percent, down -1.1 percentage points from the rate in November 2013. The African American civilian labor force decreased by 1,100, as the number of employed decreased by 400, and the number of unemployed decreased by 700. The unemployment rate for African Americans in November 2014 was 15.1 percent, down -0.4 percentage points from the rate in November 2013. Meanwhile, the Hispanic civilian labor force decreased by 400, as the number of employed increased by 800, and the number of unemployed decreased by 1,300. The unemployment rate for Hispanic residents in November 2014 was 3.8 percent, down -3.4 percentage points from the rate in November 2013.

Within the age category, the prime working-age group of 25-54 years exhibited an increase in the number of persons in the civilian labor force of 11,900 from November 2013 to November 2014, the number of employed increased by 14,200, and the number of unemployed decreased by 2,500. The unemployment rate for the 25-54 year old age group in November 2014 was 6.5 percent, down -1.3 percentage points from the rate in November 2013.

The civilian labor force for the 16-19 year old group decreased by 1,800, as the number of employed decreased by 900, and the number of unemployed decreased by 1,000. The unemployment rate for 16-19 year olds in November 2014 was 22.5 percent, down -10.6 percentage points from the rate in November 2013.

The civilian labor force for the 20-24 year old group decreased by 2,800, as the number of employed decreased by 2,900, and the number of unemployed increased by 100. The unemployment rate for 20-24 year olds in November 2014 was 14.3 percent, up 1.2 percentage points from the rate in November 2013.

The civilian labor force for the 55-64 year old group decreased by 1,300, as the number of employed decreased by 1,100, and the number of unemployed decreased by 300. The unemployment rate for 55-64 year olds in November 2014 was 9.1 percent, down -0.4 percentage points from the rate in November 2013.

The civilian labor force for the 65+ age group increased by 600 from November 2013 to November 2014, as the number of employed increased by 500 and the number of unemployed was unchanged. The unemployment rate for those 65+ in November 2014 was 5.3 percent, down -0.2 percentage points from the rate in November 2013.

Unemployment by Duration

The total number of unemployed persons in the District's civilian labor force decreased from 32,800 in November 2013 to 29,200 in November 2014. The number of long-term unemployed (27 weeks to 51 weeks) decreased -25.6 percent over the year, from 4,300 to 3,200. The percent share of long-term unemployed fell from 13.1 percent of the total unemployed population in November 2013 to 9.8 percent of the total unemployed population in November 2014.

Labor Force by Educational Attainment

Approximately 5.1 percent of the District's labor force possesses less than a High School Diploma; 14.2 percent has attained a High School Diploma or equivalent; 12.1 percent have completed some college or have obtained an Associate Degree; and 68.6 percent of the labor force has attained a Bachelor's or more advanced degree.

The November 2014 unemployment rate for those with less than a high school diploma was 17.0 percent, down -0.1 percentage points from a year earlier. From November 2013 to November 2014, the unemployment rate for high school graduates increased 0.2 percentage point to 17.0 percent. The unemployment rate in November 2014 for those with some college credits or an Associate Degree was 11.6 percent, down -1.8 percentage points from a year earlier. Finally, the November 2014 unemployment rate for those with a Bachelor's Degree or above was 3.1 percent, down from 4.1 percent in November 2013.

Not in the Labor Force

In the District, the number of individuals not in the labor force grew by 2.8 percent, from 161,400 in November 2013 to 165,900 in November 2014. Further, in November 2014, out of the more than 165,000 individuals not in the labor force, over 16,900 indicated that they want a job, and 5,600 described themselves as 'available for work'. Moreover, 8,700 individuals stated that they had searched for work within the past twelve months.

For more detailed quantitative information on all of the demographic analyses described in this section, please see the tables below on pages 13 through 16. Please note that the monthly information presented on pages 13 through 16 represents 12-month moving averages.

50	41-9021	Real Estate Brokers	18%	14	\$30.47	High school diploma or equivalent

Explanation of “High Demand, High Wage” Methodology

This three-variable index has been constructed using occupational data to create the Best Occupations in D.C. ranking. To arrive at this single three-variable index, the following steps were completed:

1. For each 6-digit Standard Occupational Classification (SOC) Code, the following three variables were included: projected percent change in D.C. employment in 2010-2020; projected annual total openings in D.C. in 2010-2020; and median annual wage in D.C. in 2011. The first two variables capture the projected occupational demand, while the third focuses on wages.
2. Each of the three variables was converted to new categorical variables with values ranging from 10 to 1 (i.e. from best to worst). These categories roughly represent the deciles of ranking by each corresponding variable.
3. A single three-variable index was generated of Best Occupations in D.C. by using the three categorical variables and the following formula

Three variable index = 0.5*percent change category + 0.5*annual total openings category + median annual wage category. Note that the formula puts equal weights on occupational demand (the first two categories together) and occupational wages (the third category). For the occupational demand component of the index, the formula puts equal weights on the “percent change” and the “annual total openings” categories. Theoretically, the value of the index can range from 20 to 2, although in practice the best occupation scores 19.5. An occupation has a high total score if it has high projected percent change in employment, high projected number of annual total openings, and a high median wage.

The “Education” column displays the typical level of education required for each occupation (according to national data provided by the U.S. Bureau of Labor Statistics). The second “High Demand, High Wage” table employs the same three variable index scoring methodology as the first table; however, this table introduces a variable to measure the percent of employees in each occupation who possess less than a Bachelor’s degree. The purpose of this table is to present jobseekers who have obtained an Associate’s degree or less with the best occupations in the District that align with their educational background.

Glossary of Terms and Concepts

How are the labor force components (i.e., civilian labor force, employed, unemployed, and unemployment rate) defined?

Below are the official concepts and definitions, as used in the Bureau of Labor Statistics (BLS) Current Population Survey (CPS):

Civilian labor force: Included are all persons in the civilian non-institutional population classified as either employed or unemployed. (See the definitions below).

Employed persons: These are all persons who, during the reference week (the week including the 12th day of the month), (a) did any work as paid employees, worked in their own business or profession or on their own farm, or worked 15 hours or more as unpaid workers in an enterprise operated by a member of their family, or (b) were not working but who had jobs from which they were temporarily absent because of vacation, illness, bad weather, childcare problems, maternity or paternity leave, labor-management dispute job training, or other family or personal reasons, whether or not they were paid for the time off or were seeking other jobs. Each employed person is counted only once, even if he or she holds more than one job.

Unemployed persons: Included are all persons who had no employment during the reference week, were available for work, except for temporary illness, and had made specific efforts to find employment some time during the 4 week-period ending with the reference week. Persons who were waiting to be recalled to a job from which they had been laid off need not have been looking for work to be classified as unemployed.

Unemployment rate: The ratio of unemployed to the civilian labor force expressed as a percent [i.e., 100 times (unemployed/labor force)].

What is a Metropolitan Statistical Area?

A Metropolitan Statistical Area (MSA) is a geographic area that contains at least one urbanized area of 50,000 or more population plus adjacent territory that has a high degree of social and economic integration with the core urban area.

What is seasonal adjustment?

Seasonal adjustment is a statistical technique that eliminates the influences of weather, holidays, the opening and closing of schools, and other recurring seasonal events from economic time series. This permits easier observation and analysis of cyclical, trend, and other non-seasonal movements in the data. By eliminating seasonal fluctuations, the unemployment series becomes smoother and it is easier to compare data from month to month. In the Local Area of Unemployment Statistics (LAUS) program, data for census regions, census divisions, states, the District of Columbia, Puerto Rico, and the seven sub-state areas are seasonally adjusted. For a more complete description of seasonal adjustment and the methodology used to estimate seasonal adjustment factors, visit <http://www.bls.gov/lau/lauseas.htm>.

How is the unemployment rate related to unemployment insurance claims?

Some people think that to get these figures on unemployment the Government uses the number of persons filing claims for unemployment insurance (UI) benefits under State or Federal Government programs. But some people are still jobless when their benefits run out, and many more are not eligible at all or delay or never apply for benefits. So, quite clearly, UI information cannot be used as a source for complete information on the number of unemployed.

The number of unemployed persons in the United States and the national unemployment rate are produced from data collected in the Current Population Survey (CPS), a monthly survey of over 60,000 households. A person's unemployment status is established by responses to a series of questions on whether they have a job or are on layoff, whether they want a job and are available to work, and what they have done to look for work in the preceding 4 weeks. The unemployment rate is the number of unemployed persons as a percent of the labor force (employed and unemployed persons).

Statistics on persons receiving unemployment insurance benefits (sometimes called insured unemployment) in the United States are collected as a byproduct of unemployment insurance programs. Workers who lose their jobs and are covered by these programs typically file claims which serve as notice that they are beginning a period of unemployment. Claimants who qualify for benefits are counted in the insured unemployment figures. More information about the Unemployment Insurance (UI) program is available from the Department of Labor's Employment and Training Administration, here: <http://www.workforcesecurity.doleta.gov/unemploy/uifactsheet.asp>; including weekly data on UI claims, here: http://workforcesecurity.doleta.gov/unemploy/claims_arch.asp.

What is the CES definition of employment?

Each month the Current Employment Statistics (CES) program surveys about 145,000 businesses and government agencies, representing approximately 557,000 individual worksites, in order to provide detailed industry data on employment, hours, and earnings of workers on nonfarm payrolls for all 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, and about 400 metropolitan areas and divisions.

Employment is the total number of persons on establishment payrolls employed full or part time who received pay for any part of the pay period which includes the 12th day of the month. Temporary and intermittent employees are included, as are any workers who are on paid sick leave, on paid holiday, or who work during only part of the specified pay period. A striking worker who only works a small portion of the survey period, and is paid, would be included as employed under the CES definitions. Persons on the payroll of more than one establishment are counted in each establishment. Data exclude proprietors, self-employed, unpaid family or volunteer workers, farm workers, and domestic workers. Persons on layoff the entire pay period, on leave without pay, on strike for the entire period or who have not yet reported for work are not counted as employed. Government employment covers only civilian workers.

Note to Our Readers

The Department of Employment Services' Office of Labor Market Research & Information (OLMRI) collects the majority of the labor market information presented in this report on a monthly basis, as an agent for the United States Department of Labor, Bureau of Labor Statistics (BLS). Information presented is derived from BLS labor force models, Current Population Survey (CPS), Local Area Unemployment Statistics (LAUS), or the Current Employment Statistics (CES) survey.

The CPS measures levels of employment and unemployment through a citywide monthly survey of approximately 660 households. This survey collects information on the employment status of each member of these households, 16 years of age and over. Members of these households who are working at more than one job are counted as employed only once. The data reflect the county where the person lives.

The Labor Market Trends Newsletter is a monthly publication of the D.C. Department of Employment Services' Office of Labor Market Research and Information (OLMRI).

For inquiries/comments/suggestions, please call (202) 671-1633.

The Department of Employment Services is an Equal Opportunity Employer/Provider.
Auxiliary aids and services are available upon request to persons with disabilities.
