D.C. Department of Employment Services
Office of Labor Market Research and Information

July-September 2005

Covered Employment and Wages

Prepared by:
D.C. Department of Employment Services
Office of Labor Market Research and Information

Anthony A. Williams, Mayor
Government of the District of Columbia

Gregory P. Irish, Director
Department of Employment Services

Barbara Lang, Chairperson
Workforce Investment Council

Issued May 2006

Each quarter, the Department of Employment Services (DOES) publishes *Covered Employment and Wages*. These comprehensive tables of employment activities focus on government and private sectors; federal and state government; and all other sectors of the economy – products, services, financial, and leisure and hospitality.

The mission of the Department of Employment Services is to plan, develop and administer employment-related services to all segments of the Washington, D.C. metropolitan population.

The D.C. Department of Employment Services (DOES) Office of Labor Market Research and Information, under the direction of Charles Roeslin III, Associate Director, compiled the statistical data and provided the technical information in this publication in cooperation with the U.S. Department of Labor's Bureau of Labor Statistics.

Information contained in this publication is in the public domain and may be reproduced with proper attribution.

Note: Employment of establishments with unique zip codes is included in the standard zip codes.

Covered Employment and Wages

District of Columbia

Covered employment and wages are based on unemployment insurance tax reports of employers subject to unemployment insurance laws.

These tables are generated from statistics produced by the District of Columbia's Covered Employment and Wages (ES-202) Program, in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics. They provide information about the basic industrial profile of the District's economy. The data are generated and published quarterly and annually.

For more information see page 15.

* **Note:** Third quarter 2005 as presented in this publication is preliminary and based on information compiled and collected through February 2006. Latest available data on covered employment and wages for the whole year 2005 will be presented in a separate publication. Details may not equal totals because some confidential or non-disclosable data are not shown in this publication. Industries for which data are confidential are not shown. Some non-confidential data are also not included if they can be used to derive confidential data within an industry or sector.

** NAICS is North American Industry Classification Code. See appendix for more information on NAICS.

*** In some cases, wages are affected by seasonal changes in business activity, the number of weeks or hours worked, if pay periods are greater or less than usual and if extra compensation is given in the form of bonuses, profits distributed, or other unidentified lump-sum payments.

Other Services, Except Public Administration (Average by Zip Code)

Note: Employment of establishments with unique zip codes is included in the standard zip codes.

Nature and Limitations of the Data on Covered Employment and Wages

The information in this publication is based on unemployment insurance tax reports submitted quarterly by employers subject to the District of Columbia's unemployment insurance laws and/or employers who employ federal civilian workers, under the Unemployment Compensation for Federal Employees Program. Covered employment and wages are reported by each firm for each month using the payroll period that includes the twelfth of each month. Total wages, taxable wages and contributions for the payroll period that includes the twelfth of each month are reported for the entire quarter.

Employment and wage data contained in this publication are classified by industry based on the North American Industry Classification System (NAICS).

The Department of Employment Services, Office of Labor Market Research and Information, under a confidentiality agreement with the U.S. Department of Labor, Bureau of Labor Statistics, does not publish or release employment, wage or any other data that could be identified with an individual employer or employee.

Coverage

Jobs that are exempt or otherwise not covered by unemployment insurance are not included in covered employment. In the private sector, this includes certain wage and salary of agricultural employees, self-employed farmers, self-employed nonagricultural workers, domestic workers and unpaid family workers. Workers covered by the railroad unemployment insurance system and members of the military, including those stationed in the United States, are also excluded. Certain types of nonprofit employers, such as religious organizations, are given a choice of coverage or exclusion in a number of states, so data for their employees are reported to a limited degree. The District of Columbia includes nonprofit employers such as religious organizations in its covered employment and wage data.

The strength of covered employment data is its comprehensiveness, which results in more accurate data and substantial industry detail. A limitation to the covered data is that it is not as timely as other data series such as the Current Employment Statistics data, which is based on a monthly survey of a smaller number of reporters.

Industrial Classification

Covered employment and wage data from 1975 through 1987 were coded according to the 1972 Standard Industrial Classification (SIC) Manual. From 1988 forward, covered data were coded according to the 1987 SIC Manual. Beginning with data for First Quarter 2001, covered data are collected and made available under both the 1987 SIC Manual and the North American Industry Classification System (NAICS). NAICS represents a change in the conceptual framework of establishment classification. Unlike the SIC system, which classifies establishments by type of activity in which they are primarily engaged, NAICS is based on a production-oriented or supply-based conceptual framework. This conceptual framework groups establishments into industries according to similarity in the processes used to produce goods or services. Full implementation of NAICS by federal statistical agencies will take place over the course of several years. After NAICS completely replaces the SIC system, dual reporting will no longer be done. Covered employment and wages data will eventually be compiled and classified according to NAICS.

Purposes and Uses

Covered employment data are instrumental in determining federal allocations of program grants to state and local governments. These outputs serve as the basic source of benchmark information for employment by industry and employment by size of establishment in the Current Employment Statistics program, the Occupational Employment Statistics program and the Occupational Safety and Health Statistics program. The Bureau of Economic Analysis of the U.S. Department of Commerce uses this data as a base for estimating a large part of the wage and salary component of personal income accounts. The Social Security Administration and state governments also use covered data in updating economic assumptions and forecasting trends in their taxable wage base. Businesses, as well as public and private research organizations find the covered employment statistics to be one of the best sources of detailed employment and wage information. Covered employment and wages are also used in other programs and activities of the U.S. Bureau of Labor Statistics.

Covered employment data have broad significance in evaluating labor trends and major industry developments. They are used in time series analysis, industry comparisons, and in special studies such as analysis of wage by size of establishment. Covered employment and wage data are used by the U.S. Department of Labor's Employment and Training Administration and various state employment security agencies in administering the employment security program.

North American Industry Classification System (NAICS)

NAICS (pronounced “nakes”) is the new North American Industry Classification System. It replaces the decades-old Standard Industrial Classification (SIC) system. It provides a better way to classify individual businesses.

Background

For more than 60 years, the Standard Industrial Classification (SIC) system has served as the structure for the collection, aggregation, presentation and analysis of the U.S. economy. An industry consists of a group of establishments primarily engaged in producing or handling the same product or group of products or in rendering the same services. Industry definitions used in U.S. Bureau of Labor Statistics programs come from the 1987 Standard Industrial Classification (SIC) Manual. Because the SIC is used by many other federal government statistical programs, it is possible for users to assemble a comprehensive statistical picture of an industry.

The SIC system was developed in the 1930’s at a time when manufacturing dominated the U.S. economic scene. Over the last 60 years, there have been numerous revisions to the SIC system, reflecting the economy’s changing industrial composition. However, despite these revisions, the system has received increasing criticism about its ability to handle rapid changes in the U.S. economy. Recent developments in information services, new forms of health care provision, expansion of services and high-tech manufacturing are examples of industrial changes that cannot be studied under the current SIC system.

Introducing NAICS

Developed by the United States, in cooperation with Canada and Mexico, the North American Industry Classification System (NAICS) represents one of the most profound changes for statistical programs focusing on emerging economic activities. NAICS, developed using a production-oriented conceptual framework, groups establishments into industries based on the activity in which they are primarily engaged. Establishments using similar raw material inputs, similar capital equipment and similar labor are classified in the same industry. In other words, establishments that do similar things in similar ways are classified together.

NAICS provides a new tool that ensures that economic statistics reflect our nation’s changing economy. However, improved statistics will result in time series breaks. Every sector of the economy has been restructured and redefined. A new information sector combines communications, publishing, motion picture and sound recording and online services, recognizing our information-based economy. Manufacturing is restructured to recognize new high-tech industries. A new sub-sector is devoted to computers and electronics, including reproduction of software. Retail Trade is redefined. In addition, eating and drinking places are transferred to a new Accommodation and Food Services sector.

The difference between Retail and Wholesale is now based on how each store conducts business. For example, many computer stores are reclassified from wholesale to retail. Nine new service sectors and 250 new service industries are recognized.

Why is NAICS better?

Relevancy. NAICS identifies more industries that contribute to today’s economy; more than 350 new industries and nine new service industry sectors. The Manufacturing sector is restructured to recognize new high-tech industries.

Comparability. NAICS was developed by the United States, Canada and Mexico to produce comparable data.

Consistency. NAICS uses a consistent principle: businesses that use similar production processes are grouped together.

Adaptability. NAICS will be reviewed every five years, so classifications and information keep up with our changing economy.

Quality. NAICS will improve key measures of U.S. economic activity such as retail sales, manufacturers’ shipments, and service industry receipts.

NAICS Coding Structure

NAICS uses a six digit hierarchical coding system to classify all economic activity into 20 industry sectors. Five sectors are mainly goods-producing sectors and 15 are entirely services-producing sectors. This six digit hierarchical structure allows greater coding flexibility than the four digit structure of the SIC. NAICS allows for the identification of 1,170 industries compared to the 1,004 found in the SIC system.

Notice of Non-Discrimination

In accordance with the D.C. Human Rights Act of 1977, as amended, D.C. Official Code Section 2-1401.01 et seq., (Act) the District of Columbia does not discriminate on the basis of actual or perceived: race, color, religion, national origin, sex, age, marital status, personal appearance, sexual orientation, familial status, family responsibilities, matriculation, political affiliation, disability, source of income, or place of residence or business. Sexual harassment is a form of sex discrimination which is prohibited by the Act. In addition, harassment based on any of the above protected categories is prohibited by the Act. Discrimination in violation of the Act will not be tolerated. Violators will be subject to disciplinary action.

The Department of Employment Services is an Equal Opportunity Employer/Provider. Auxiliary aids and services are available upon request to persons with disabilities.
