Quick Facts:

Over the Month and Over the Year Changes in Unemployment Rate and Job Growth

National Unemployment Rates

The August 2014 national unemployment rate of 6.3 percent (not seasonally adjusted) was -0.2 percentage points lower than the rate in July 2014 and -1.0 percentage points lower than the rate in August 2013.

The seasonally adjusted national unemployment rate in August 2014 was 6.1 percent, down -0.1 percentage point from the July 2014 rate and -1.1 percentage point lower than the August 2013 unemployment rate.

State Unemployment Rates (Seasonally Adjusted)

In July 2014, the District of Columbia had the highest. In August 2014, the District of Columbia had the highest unemployment rate at 7.8 percent. Nevada recorded the second highest jobless rate at 7.5 percent followed by California, Mississippi, and Rhode Island at 7.4 percent each. North Dakota, at 2.7 percent, posted the lowest unemployment rate, followed by Nebraska at 3.2 percent, South Dakota at 3.3 percent, and Utah and Minnesota at 3.7 percent each.

Thirty-three states, reported over-the-month unemployment decreases, two states had rate increases, and sixteen states, including the District of Columbia had no rate change. Colorado, Kentucky, Illinois, Michigan and Rhode Island recorded the largest rate decreases (-0.2 percentage points each).

Compared to a year earlier, forty-nine states, including the District of Columbia, registered unemployment rate decreases, one state reported a rate increase, and one state (Alaska) saw no rate change. Illinois reported the largest jobless rate decrease from a year earlier (-2.3 percentage points), followed by Kentucky (-2.0 percentage points), and Ohio (-1.9 percentage points). Eighteen other states had jobless rates at least 1.0 percentage point lower than a year earlier.

Not seasonally adjusted data

District of Columbia's Unemployment Rate

The District of Columbia's seasonally adjusted August 2014 unemployment rate was 7.8 percent, unchanged from the July 2014 rate and 0.7 percentage points lower than the rate in August 2013..

District of Columbia's Civilian Labor Force, Employment and Unemployment

Over the month, the District of Columbia's not seasonally adjusted civilian labor force decreased by 5,300 to 378,700. A total of 348,000 residents were employed and 30,600 were unemployed in August 2014. The number of employed residents decreased by 4,800 along with a decrease in the number of unemployed residents of 600, resulting in a no change in the not seasonally adjusted unemployment rate.

From August 2013 to August 2014, the District's civilian labor force increased by 6,500, as the number of employed residents increased by 7,800 and the number of unemployed residents decreased by 1,400, resulting in an over the year 0.5 percentage point decrease in the not seasonally adjusted unemployment rate.

District of Columbia Job Growth

The not seasonally adjusted number of District wage and salary jobs decreased by 14,600 (-1.9 percent) from July to August 2014. The private sector lost 1,700 jobs (-0.3 percent) while the public sector decreased by 12,900 jobs (-5.3 percent). In the private sector, Trade, Transportation and Utilities increased by 300 jobs (1.0 percent), and Leisure

and Hospitality added 300 jobs (0.4 percent). The private sectors that lost jobs included: Educational and Health Services (-500 jobs), Professional and Business Services (-1,000 jobs), Other Services (-400 jobs), Information (-300 jobs), and Financial Activities (-100 jobs). Meanwhile, Mining, Logging & Construction and Manufacturing sectors were unchanged over-the-month. In the public sector, the District government lost 11,900 jobs, this was due to the DC Government Summer Youth Program ending; the Federal government lost 1,000 jobs each, while Public Transportation remained unchanged over the month.

In the last twelve months, the District gained a total of 400 jobs (0.1 percent). The private sector added 5,400 jobs (1.1 percent) and the public sector lost 5,000 jobs (-2.1 percent). The private sector growth occurred in Leisure and Hospitality (up 1,800 jobs or 2.6 percent), Professional and Business Services (up 600 jobs or 0.4 percent), Financial Activities (up 1,500 jobs or 5.2 percent), Trade, Transportation and Utilities (up 1,700 jobs or 5.9 percent), Other Services (up 1,300 jobs or 1.9 percent), and Mining, Logging & Construction (up 100 jobs or 0.7 percent). Losses were noted in Information (down 200 jobs or -1.1 percent), and Educational and Health Services (down 1,400 jobs or -1.2 percent). Meanwhile, Manufacturing remained unchanged over the year. In the public sector, the District government gained 1,900 jobs while the Federal government shed 6,900 jobs over the year. jobs or -1.0 percent. Meanwhile, Manufacturing remained unchanged over the year. In the public sector, the District government gained 2,100 jobs and Public Transportation added 100 jobs, while the Federal government shed 6,600 jobs over the year.

Washington Metropolitan Statistical Area (MSA) Job Growth

Total wage and salary employment in the Washington Metropolitan Statistical Area decreased over the month in August 2014 by 16,000 (-0.6 percent). The private sector decreased by 1,700 jobs (-0.1 percent) while the public sector decreased by 14,300 jobs (-2.5 percent). Within the private sector, gains were registered in Manufacturing (up 100 jobs or 0.3 percent), Mining, Logging & Construction (up 600 jobs or 0.5 percent), and Information (up 400 jobs or 0.6 percent). Losses were experienced in Trade, Transportation and Utilities (down 100 jobs), Financial Activities (down 500 jobs or -0.4 percent), Professional and Business Services (down 1,400 jobs or -0.2 percent), Leisure and Hospitality (down 300 jobs or -0.1 percent), Other Services (down 500 jobs or -0.3 percent). Meanwhile, Educational and Health Services was unchanged from over-the-month. In the public

sector, the Federal government lost 900 jobs; State government lost 10,600 jobs.

During the last twelve months, the Washington Metropolitan Statistical Area gained a total of 10,400 jobs (0.4 percent). The private sector added 13,600 jobs (0.7 percent) and the public sector lost 3,200 jobs (-0.6 percent). Private sector growth occurred in Leisure and Hospitality (up 5,800 jobs or 2.3 percent), Financial Activities (up 700 jobs or 0.6 percent), Trade, Transportation and Utilities (up 5,000 jobs or 1.6 percent), Educational and Health Services (up 900 jobs or 0.3 percent), and Other Services (up 2,300 jobs or 1.4 percent). Losses were registered in Professional and Business Services (down 900 jobs or -0.2 percent), and Mining, Logging & Construction (down 500 jobs or -0.4 percent). In the public sector, the Federal government decreased by 8,200 jobs; State government increased by 1,800 jobs.

District of Columbia, Washington Metropolitan Division, and Washington Metropolitan Area Civilian Labor Force

Washington Metropolitan Division Civilian Labor Force Employment and Unemployment Rate

The civilian labor force in the Washington Metropolitan Division decreased by 36,500 from July to August 2014, as employment decreased by 34,300 and the number unemployed decreased by 2,200. The not seasonally adjusted unemployment rate in the Washington Metropolitan Division, at 5.5 percent in August 2014, was unchanged from the previous month.

Over the last twelve months, the number of employed residents in the Washington Metropolitan Division rose by 12,300. Over the year, 5,700 fewer Division residents were unemployed, and the division civilian labor force rose by 6,600. The Metropolitan Division's not seasonally adjusted August 2014 unemployment rate was down 0.2 percentage points from the rate in August 2013.

Washington Metropolitan Area Civilian Labor Force Employment and Unemployment Rate

The civilian labor force in the Suburban Ring of communities surrounding the District of Columbia decreased by 39,100 from July to August 2014, as employment fell by 35,900 and the number of unemployed residents decreased by 3,100. The not seasonally adjusted unemployment rate in the Suburban Ring, at 4.9 percent in August 2014, was down 0.1 percentage points from the prior month.

Over the year, there was an increase of 3,500 employed residents in the Suburban Ring. While there were 6,900 fewer unemployed suburban residents, the suburban civilian labor force also fell by 3,400. The Suburban Ring's August unemployment rate was down 0.3 percentage points from August 2013.

For the Washington Metropolitan Statistical Area (MSA), in August 2014, the number of persons in the civilian labor force decreased by 44,400 from the previous month, the number of employed residents decreased by 40,700, and the number of unemployed residents decreased by 3,700. The MSA's unemployment rate for August 2014 was 5.3 percent, unchanged from the rate in July 2014. Compared to August 2013, the MSA's civilian labor force rose by 3,100. Employment increased by 11,300 and unemployment decreased by 8,300. The Washington Metropolitan Area's August 2014 not seasonally adjusted unemployment rate was down 0.3 percentage points from the August 2013 rate of 5.6 percent.

0.3

The Washington Metropolitan Area's August 2014 not seasonally adjusted unemployment rate was down 0.3 percentage points from the August 2013 rate of 5.6 percent.

Employment Status by Demographic Groups

From August 2013 to August 2014, the civilian labor force for the white population in the District increased by 1,700, as the number of employed increased by 2,300, and the number of unemployed decreased by 500. The unemployment rate for whites in August 2014 was 3.4 percent, down -0.3 percentage points from the rate in August 2013. The African American civilian labor force decreased by 3,400, as the number of employed decreased by 1,800, and the number of unemployed decreased by 1,600. The unemployment rate for African Americans in August 2014 was 15.0 percent, down -0.7 percentage points from the rate in August 2013. Meanwhile, the Hispanic civilian labor force decreased by 2,000, as the number of employed decreased by 300, and the number of unemployed decreased by 1,600. The unemployment rate for Hispanic residents in August 2014 was 4.1 percent, down 4.0 percentage point from the rate in August 2013.

Within the age category, the prime working-age group of 25-54 years exhibited an increase in the number of persons in the civilian labor force of 7,600 from August 2013 to August 2014, the number of employed increased by 9,000, and the number of unemployed decreased by 1,300. The unemployment rate for the 25-54 year old age group in August 2014 was 7.0 percent, down -0.7 percentage points from the rate in August 2013.

The civilian labor force for the 16-19 year old group decreased by 1,700, as the number of employed decreased by 1,100, and the number of unemployed decreased by 600. The unemployment rate for 16-19 year olds in August 2014 was 26.8 percent, down 2.3 percentage points from the rate in August 2013.

The civilian labor force for the 20-24 year old group decreased by 5,500, as the number of employed decreased by 5,200, and the number of unemployed decreased by 300. The unemployment rate for 20-24 year olds in August 2014 was 14.5 percent, up 1.1 percentage points from the rate in August 2013.

The civilian labor force for the 55-64 year old group decreased by 200, as the number of employed decreased by 100, and the number of unemployed was unchanged. The unemployment rate for 55-64 year olds in August 2014 was 8.8 percent, unchanged from the rate in August 2013. The civilian labor force for the 65+ age group increased by 400 from August 2013 to August 2014, as the number of employed increased by 500 and the number of unemployed increased by 200. The unemployment rate for those 65+ in August 2014 was 6.1 percent, up 1.0 percentage point from the rate in August 2013.

Unemployment by Duration

The total number of unemployed persons in the District's civilian labor force decreased from 32,300 in August 2013 to 30,100 in August 2014. The number of long-term unemployed (27 weeks to 51 weeks) decreased -16.7 percent over the year, from 4,200 to 3,500. The share percent of the long-term unemployed fell from 13.0 percent of the total unemployed population in August 2013 to 11.6 percent of the total unemployed population in August 2014.

Labor Force by Educational Attainment

Approximately 5.3 percent of the District's labor force possesses less than a High School Diploma; 14.1 percent has attained a High School Diploma or equivalent; 12.5 percent have completed some college or have obtained an Associate Degree; and 68.1 percent of the labor force has attained a Bachelor's or more advanced degree.

The August 2014 unemployment rate for those with less than a high school diploma was 15.3 percent, down -2.4 percentage points from a year earlier. From August 2013 to August 2014, the unemployment rate for high school graduates increased 0.3 percentage points to 17.0 percent. The unemployment rate in August 2014 for those with some college credits or an Associate Degree was 11.3 percent, down -2.8 percentage points from a year earlier. Finally, the August 2014 unemployment rate for those with a Bachelor's Degree or above was 3.7 percent, which was unchanged from the August 2013 rate.

Not in the Labor Force

In the District, the number of individuals not in the labor force grew by 6.4 percent, from 158,300 in August 2013 to 168,400 in August 2014. Further, in August 2014, out of the more than 168,000 individuals not in the labor force, over 18,000 indicated that they want a job, and 6,100 described themselves as 'available for work'. Moreover, 9,400 individuals stated that they had searched for work within the past twelve months.

For more detailed quantitative information on all of the demographic analyses described in this section, please see the tables below on pages 13 through 16. Please note that the monthly information presented on pages 13 through 16 represents 12-month moving averages.

50	41-9021	Real Estate Brokers	18%	14	\$30.47	High school diploma or equivalent

Explanation of “High Demand, High Wage” Methodology

This three-variable index has been constructed using occupational data to create the Best Occupations in D.C. ranking. To arrive at this single three-variable index, the following steps were completed:

1. For each 6-digit Standard Occupational Classification (SOC) Code, the following three variables were included: projected percent change in D.C. employment in 2010-2020; projected annual total openings in D.C. in 2010-2020; and median annual wage in D.C. in 2011. The first two variables capture the projected occupational demand, while the third focuses on wages.
2. Each of the three variables was converted to new categorical variables with values ranging from 10 to 1 (i.e. from best to worst). These categories roughly represent the deciles of ranking by each corresponding variable.
3. A single three-variable index was generated of Best Occupations in D.C. by using the three categorical variables and the following formula:

$$\text{Three variable index} = 0.5 * \text{percent change category} + 0.5 * \text{annual total openings category} + \text{median annual wage category}.$$

Note that the formula puts equal weights on occupational demand (the first two categories together) and occupational wages (the third category). For the occupational demand component of the index, the formula puts equal weights on the “percent change” and the “annual total openings” categories. Theoretically, the value of the index can range from 20 to 2, although in practice the best occupation scores 19.5. An occupation has a high total score if it has high projected percent change in employment, high projected number of annual total openings, and a high median wage.

The “Education” column displays the typical level of education required for each occupation (according to national data provided by the U.S. Bureau of Labor Statistics).

The second “High Demand, High Wage” table employs the same three variable index scoring methodology as the first table; however, this table introduces a variable to measure the percent of employees in each occupation who possess less than a Bachelor’s degree. The purpose of this table is to present jobseekers who have obtained an Associate’s degree or less with the best occupations in the District that align with their educational background.

Glossary of Terms and Concepts

How are the labor force components (i.e., civilian labor force,

employed, unemployed, and unemployment rate) defined?

Below are the official concepts and definitions, as used in the Bureau of Labor Statistics (BLS) Current Population Survey (CPS):

Civilian labor force: Included are all persons in the civilian non-institutional population classified as either employed or unemployed. (See the definitions below).

Employed persons: These are all persons who, during the reference week (the week including the 12th day of the month), (a) did any work as paid employees, worked in their own business or profession or on their own farm, or worked 15 hours or more as unpaid workers in an enterprise operated by a member of their family, or (b) were not working but who had jobs from which they were temporarily absent because of vacation, illness, bad weather, childcare problems, maternity or paternity leave, labor-management dispute job training, or other family or personal reasons, whether or not they were paid for the time off or were seeking other jobs. Each employed person is counted only once, even if he or she holds more than one job.

Unemployed persons: Included are all persons who had no employment during the reference week, were available for work, except for temporary illness, and had made specific efforts to find employment some time during the 4 week-period ending with the reference week. Persons who were waiting to be recalled to a job from which they had been laid off need not have been looking for work to be classified as unemployed.

Unemployment rate: The ratio of unemployed to the civilian labor force expressed as a percent [i.e., 100 times (unemployed/labor force)].

What is a Metropolitan Statistical Area?

A Metropolitan Statistical Area (MSA) is a geographic area that contains at least one urbanized area of 50,000 or more population plus adjacent territory that has a high degree of social and economic integration with the core urban area.

What is seasonal adjustment?

Seasonal adjustment is a statistical technique that eliminates the influences of weather, holidays, the opening and closing of schools, and other recurring seasonal events from economic time series. This permits easier observation and analysis of cyclical, trend, and other non-seasonal movements in the data. By eliminating seasonal fluctuations, the unemployment series becomes smoother and it is easier to compare data from month to month. In the Local Area of Unemployment Statistics (LAUS) program, data for census regions, census divisions, states, the District of Columbia, Puerto Rico, and the seven sub-state areas are seasonally

adjusted. For a more complete description of seasonal adjustment and the methodology used to estimate seasonal adjustment factors, visit <http://www.bls.gov/lau/lauseas.htm>.

How is the unemployment rate related to unemployment insurance claims?

Some people think that to get these figures on unemployment the Government uses the number of persons filing claims for unemployment insurance (UI) benefits under State or Federal Government programs. But some people are still jobless when their benefits run out, and many more are not eligible at all or delay or never apply for benefits. So, quite clearly, UI information cannot be used as a source for complete information on the number of unemployed.

The number of unemployed persons in the United States and the national unemployment rate are produced from data collected in the Current Population Survey (CPS), a monthly survey of over 60,000 households. A person's unemployment status is established by responses to a series of questions on whether they have a job or are on layoff, whether they want a job and are available to work, and what they have done to look for work in the preceding 4 weeks. The unemployment rate is the number of unemployed persons as a percent of the labor force (employed and unemployed persons).

Statistics on persons receiving unemployment insurance benefits (sometimes called insured unemployment) in the United States are collected as a byproduct of unemployment insurance programs. Workers who lose their jobs and are covered by these programs typically file claims which serve as notice that they are beginning a period of unemployment. Claimants who qualify for benefits are counted in the insured unemployment figures. More information about the Unemployment Insurance (UI) program is available from the Department of Labor's Employment and Training Administration, here: <http://www.workforcesecurity.doleta.gov/unemploy/uifactsheet.asp>; including weekly data on UI claims, here: http://workforcesecurity.doleta.gov/unemploy/claims_arch.asp.

What is the CES definition of employment?

Each month the Current Employment Statistics (CES) program surveys about 145,000 businesses and government agencies, representing approximately 557,000 individual worksites, in order to provide detailed industry data on employment, hours, and earnings of workers on nonfarm payrolls for all 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, and about 400 metropolitan areas and divisions.

Employment is the total number of persons on establishment payrolls employed full or part time who received pay for any part of the pay period which includes the 12th day of the month. Temporary and intermittent employees are included, as are any workers who are on paid sick leave, on

paid holiday, or who work during only part of the specified pay period. A striking worker who only works a small portion of the survey period, and is paid, would be included as employed under the CES definitions. Persons on the payroll of more than one establishment are counted in each establishment. Data exclude proprietors, self-employed, unpaid family or volunteer workers, farm workers, and domestic workers. Persons on layoff the entire pay period, on leave without pay, on strike for the entire period or who have not yet reported for work are not counted as employed. Government employment covers only civilian workers.

Note to Our Readers

The Department of Employment Services' Office of Labor Market Research & Information (OLMRI) collects the majority of the labor market information presented in this report on a monthly basis, as an agent for the United States Department of Labor, Bureau of Labor Statistics (BLS). Information presented is derived from BLS labor force models, Current Population Survey (CPS), Local Area Unemployment Statistics (LAUS), or the Current Employment Statistics (CES) survey.

The CPS measures levels of employment and unemployment through a citywide monthly survey of approximately 660 households. This survey collects information on the employment status of each member of these households, 16 years of age and over. Members of these households who are working at more than one job are counted as employed only once. The data reflect the county where the person lives.

The CES survey contacts approximately 1,500 businesses in the District of Columbia each month and collects information as to the number of jobs on the payroll for that month. Individuals who hold more than one job are counted once for each job. The data reflect the county where the job is located. These data, which present employment by industry division, are commonly referred to as the "establishment survey" or the "wage and salary employment series." Each month the CES Program releases "Preliminary" employment and hours and earnings data for the prior month; also, "Revised" data are published for the month preceding the prior month. Once OLMRI and BLS have verified the "Revised" data, they remain unchanged until the new benchmark is completed in March of the following year.

The LAUS county data are estimated using a BLS prescribed multi-step estimation process, incorporating a variety of information including, but not limited to, CES survey data, agricultural employment, and unemployment claims data for local areas. The data reflect the county where the person lives.

The Labor Market Trends Newsletter is a monthly publication of the DC. Department of Employment Services' Office of Labor Market Research and Information (OLMRI).
