Quick Facts:

Over the Month and Over the Year Changes in Unemployment Rate and Job Growth

National Unemployment Rates

The October 2014 national unemployment rate of 5.5 percent (not seasonally adjusted) was -0.2 percentage point lower than the rate in September 2014 and -1.5 percentage points lower than the rate in October 2013.

The seasonally adjusted national unemployment rate in October 2014 was 5.7 percent, down -0.2 percentage points from the September 2014 rate and -1.5 percentage points lower than the October 2013 unemployment rate.

State Unemployment Rates (Seasonally Adjusted)

In October 2014, the District of Columbia had the highest unemployment rate at 7.7 percent. Mississippi recorded the second highest jobless rate at 7.3 percent followed by California and Nevada at 7.2 percent each; Louisiana and Rhode Island at 7.0 percent each; and Georgia and Oregon at 6.8 percent each. North Dakota, at 2.8 percent, posted the lowest unemployment rate, followed by Nebraska at 3.1 percent, South Dakota at 3.3 percent, and Utah at 3.6 percent.

Thirty states, including the District of Columbia, reported over-the-month unemployment decreases, three states had rate increases, and eighteen states had no rate change. Kentucky, West Virginia and Rhode Island recorded the largest rate decreases (-0.2 percentage points each).

Compared to a year earlier, forty-nine states, including the District of Columbia, registered unemployment rate decreases, one state (Louisiana) reported a rate increase, and one state (North Dakota) saw no rate change. Illinois reported the largest jobless rate decrease from a year earlier (-2.3 percentage points), followed by Kentucky (-2.2 percentage points), and Ohio and Rhode Island (-1.9 percentage points each). Fifteen other states had jobless rates at least 1.0 percentage point lower than a year earlier.

District of Columbia, Washington Metropolitan Division, and Washington Metropolitan Area Civilian Labor Force

Washington Metropolitan Division Civilian Labor Force Employment and Unemployment Rate

The civilian labor force in the Washington Metropolitan Division increased by 15,300 from September to October 2014, as employment increased by 21,300 and the number unemployed decreased by 5,900. The not seasonally adjusted unemployment rate in the Washington Metropolitan Division, at 4.8 percent in October 2014, was down 0.3 percentage points from the previous month.

Over the last twelve months, the number of employed residents in the Washington Metropolitan Division rose by 46,800. Over the year, 24,800 fewer Division residents were unemployed, and the division civilian labor force rose by 22,000. The Metropolitan Division's not seasonally adjusted October 2014 unemployment rate was down 1.0 percent from the rate in October 2013.

Washington Metropolitan Area Civilian Labor Force Employment and Unemployment Rate

The civilian labor force in the Suburban Ring of communities surrounding the District of Columbia increased by 16,300 from September to October 2014, as employment increased by 22,200 and the number of unemployed residents decreased by 5,900. The not seasonally adjusted unemployment rate in the Suburban Ring, at 4.3 percent in October 2014, was down 0.3 percentage points from the prior month.

Over the year, there was an increase of 37,100 employed residents in the Suburban Ring. While there were 27,700 fewer unemployed suburban residents, the suburban civilian labor force rose by 9,300. The Suburban Ring's October unemployment rate was down 1.0 percent from October 2013.

For the Washington Metropolitan Statistical Area (MSA), in October 2014, the number of persons in the civilian labor force increased by 19,100 from the previous month, the number of employed residents increased by 25,800, and the number of unemployed residents decreased by 6,700. The MSA's unemployment rate for October 2014 was 4.7 percent, down 0.3 percentage points from the rate in September 2014. Compared to October 2013, the MSA's civilian labor force rose by 22,000. Employment increased by 52,100 and unemployment decreased by 30,100. The Washington Metropolitan Area's October 2014 not seasonally adjusted unemployment rate was down 1.0 percent from the October 2013 rate of 5.7 percent.

1.0%

The Washington Metropolitan Area's September 2014 not seasonally adjusted unemployment rate was down 1.0 percentage points from the October 2013 rate of 5.7 percent.

Employment Status by Demographic Groups

From October 2013 to October 2014, the civilian labor force for the white population in the District increased by 4,700, as the number of employed increased by 6,900, and the number of unemployed decreased by 2,100. The unemployment rate for whites in October 2014 was 2.9 percent, down -1.1 percentage points from the rate in October 2013. The African American civilian labor force decreased by 1,700, as the number of employed decreased by 200, and the number of unemployed decreased by 1,500. The unemployment rate for African Americans in October 2014 was 14.9 percent, down -0.9 percentage points from the rate in October 2013. Meanwhile, the Hispanic civilian labor force decreased by 1,500, as the number of employed decreased by 100, and the number of unemployed decreased by 1,400. The unemployment rate for Hispanic residents in October 2014 was 3.8 percent, down -3.6 percentage points from the rate in October 2013.

Within the age category, the prime working-age group of 25-54 years exhibited an increase in the number of persons in the civilian labor force of 11,600 from October 2013 to October 2014, the number of employed increased by 14,400, and the number of unemployed decreased by 2,900. The unemployment rate for the 25-54 year old age group in October 2014 was 6.5 percent, down -1.4 percentage points from the rate in October 2013.

The civilian labor force for the 16-19 year old group decreased by 1,800, as the number of employed decreased by 900, and the number of unemployed decreased by 900. The unemployment rate for 16-19 year olds in October 2014 was 25.1 percent, down -8.2 percentage points from the rate in October 2013.

The civilian labor force for the 20-24 year old group decreased by 4,300, as the number of employed decreased by 4,000, and the number of unemployed decreased by 400. The unemployment rate for 20-24 year olds in October 2014 was 14.0 percent, up 0.5 percentage points from the rate in October 2013.

The civilian labor force for the 55-64 year old group decreased by 1,600, as the number of employed decreased by 1,300, and the number of unemployed decreased by 400. The unemployment rate for 55-64 year olds in October 2014 was 8.9 percent, down -0.6 percentage points from the rate in October 2013.

The civilian labor force for the 65+ age group increased by 600 from October 2013 to October 2014, as the number of employed increased by 500 and the number of unemployed increased by 100. The unemployment rate for those 65+ in October 2014 was 5.5 percent, up 0.4 percentage point from the rate in October 2013.

Unemployment by Duration

The total number of unemployed persons in the District's civilian labor force decreased from 33,300 in October 2013 to 29,000 in October 2014. The number of long-term unemployed (27 weeks to 51 weeks) decreased 19.5 percent over the year, from 4,100 to 3,300. The percent share of long-term unemployed fell from 12.3 percent of the total unemployed population in October 2013 to 9.9 percent of the total unemployed population in October 2014.

Labor Force by Educational Attainment

Approximately 5.0 percent of the District's labor force possesses less than a High School Diploma; 14.3 percent has attained a High School Diploma or equivalent; 12.0 percent have completed some college or have obtained an Associate Degree; and 68.5 percent of the labor force has attained a Bachelor's or more advanced degree.

The October 2014 unemployment rate for those with less than a high school diploma was 17.3 percent, up 0.2 percentage points from a year earlier. From October 2013 to October 2014, the unemployment rate for high school graduates increased 0.1 percentage point to 16.7 percent. The unemployment rate in October 2014 for those with some college credits or an Associate Degree was 11.2 percent, down -2.7 percent from a year earlier. Finally, the October 2014 unemployment rate for those with a Bachelor's Degree or above was 3.2 percent, down from 4.1 percent in October 2013.

Not in the Labor Force

In the District, the number of individuals not in the labor force grew by 4.0 percent, from 160,100 in October 2013 to 166,500 in October 2014. Further, in October 2014, out of the more than 166,000 individuals not in the labor force, over 17,600 indicated that they want a job, and 5,900 described themselves as 'available for work'. Moreover, 9,200 individuals stated that they had searched for work within the past twelve months.

For more detailed quantitative information on all of the demographic analyses described in this section, please see the tables below on pages 13 through 16. Please note that the monthly information presented on pages 13 through 16 represents 12-month moving averages.

50	41-9021	Real Estate Brokers	18%	14	\$30.47	High school diploma or equivalent

Explanation of “High Demand, High Wage” Methodology

This three-variable index has been constructed using occupational data to create the Best Occupations in D.C. ranking. To arrive at this single three-variable index, the following steps were completed:

1. For each 6-digit Standard Occupational Classification (SOC) Code, the following three variables were included: projected percent change in D.C. employment in 2010-2020; projected annual total openings in D.C. in 2010-2020; and median annual wage in D.C. in 2011. The first two variables capture the projected occupational demand, while the third focuses on wages.
2. Each of the three variables was converted to new categorical variables with values ranging from 10 to 1 (i.e. from best to worst). These categories roughly represent the deciles of ranking by each corresponding variable.
3. A single three-variable index was generated of Best Occupations in D.C. by using the three categorical variables and the following formula:

Three variable index = $0.5 \times \text{percent change category} + 0.5 \times \text{annual total openings category} + \text{median annual wage category}$. Note that the formula puts equal weights on occupational demand (the first two categories together) and occupational wages (the third category). For the occupational demand component of the index, the formula puts equal weights on the “percent change” and the “annual total openings” categories. Theoretically, the value of the index can range from 20 to 2, although in practice the best occupation scores 19.5. An occupation has a high total score if it has high projected percent change in employment, high projected number of annual total openings, and a high median wage.

The “Education” column displays the typical level of education required for each occupation (according to national data provided by the U.S. Bureau of Labor Statistics). The second “High Demand, High Wage” table employs the same three variable index scoring methodology as the first table; however, this table introduces a variable to measure the percent of employees in each occupation who possess less than a Bachelor’s degree. The purpose of this table is to present jobseekers who have obtained an Associate’s degree or less with the best occupations in the District that align with their educational background.

Glossary of Terms and Concepts

How are the labor force components (i.e., civilian labor force, employed, unemployed, and unemployment rate) defined?

Below are the official concepts and definitions, as used in the Bureau of Labor Statistics (BLS) Current Population Survey (CPS):

Civilian labor force: Included are all persons in the civilian non-institutional population classified as either employed or unemployed. (See the definitions below).

Employed persons: These are all persons who, during the reference week (the week including the 12th day of the month), (a) did any work as paid employees, worked in their own business or profession or on their own farm, or worked 15 hours or more as unpaid workers in an enterprise operated by a member of their family, or (b) were not working but who had jobs from which they were temporarily absent because of vacation, illness, bad weather, childcare problems, maternity or paternity leave, labor-management dispute job training, or other family or personal reasons, whether or not they were paid for the time off or were seeking other jobs. Each employed person is counted only once, even if he or she holds more than one job.

Unemployed persons: Included are all persons who had no employment during the reference week, were available for work, except for temporary illness, and had made specific efforts to find employment some time during the 4 week-period ending with the reference week. Persons who were waiting to be recalled to a job from which they had been laid off need not have been looking for work to be classified as unemployed.

Unemployment rate: The ratio of unemployed to the civilian labor force expressed as a percent [i.e., 100 times (unemployed/labor force)].

What is a Metropolitan Statistical Area?

A Metropolitan Statistical Area (MSA) is a geographic area that contains at least one urbanized area of 50,000 or more population plus adjacent territory that has a high degree of social and economic integration with the core urban area.

What is seasonal adjustment?

Seasonal adjustment is a statistical technique that eliminates the influences of weather, holidays, the opening and closing of schools, and other recurring seasonal events from economic time series. This permits easier observation and analysis of cyclical, trend, and other non-seasonal movements in the data. By eliminating seasonal fluctuations, the unemployment series becomes smoother and it is easier to

compare data from month to month. In the Local Area of Unemployment Statistics (LAUS) program, data for census regions, census divisions, states, the District of Columbia, Puerto Rico, and the seven sub-state areas are seasonally adjusted. For a more complete description of seasonal adjustment and the methodology used to estimate seasonal adjustment factors, visit <http://www.bls.gov/lau/lauseas.htm>.

How is the unemployment rate related to unemployment insurance claims?

Some people think that to get these figures on unemployment the Government uses the number of persons filing claims for unemployment insurance (UI) benefits under State or Federal Government programs. But some people are still jobless when their benefits run out, and many more are not eligible at all or delay or never apply for benefits. So, quite clearly, UI information cannot be used as a source for complete information on the number of unemployed.

The number of unemployed persons in the United States and the national unemployment rate are produced from data collected in the Current Population Survey (CPS), a monthly survey of over 60,000 households. A person's unemployment status is established by responses to a series of questions on whether they have a job or are on layoff, whether they want a job and are available to work, and what they have done to look for work in the preceding 4 weeks. The unemployment rate is the number of unemployed persons as a percent of the labor force (employed and unemployed persons).

Statistics on persons receiving unemployment insurance benefits (sometimes called insured unemployment) in the United States are collected as a byproduct of unemployment insurance programs. Workers who lose their jobs and are covered by these programs typically file claims which serve as notice that they are beginning a period of unemployment. Claimants who qualify for benefits are counted in the insured unemployment figures. More information about the Unemployment Insurance (UI) program is available from the Department of Labor's Employment and Training Administration, here: <http://www.workforcesecurity.doleta.gov/unemploy/uifactsheet.asp>; including weekly data on UI claims, here: http://workforcesecurity.doleta.gov/unemploy/claims_arch.asp.

What is the CES definition of employment?

Each month the Current Employment Statistics (CES) program surveys about 145,000 businesses and government agencies, representing approximately 557,000 individual worksites, in order to provide detailed industry data on employment, hours, and earnings of workers on nonfarm payrolls for all 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, and about 400 metropolitan areas

and divisions.

Employment is the total number of persons on establishment payrolls employed full or part time who received pay for any part of the pay period which includes the 12th day of the month. Temporary and intermittent employees are included, as are any workers who are on paid sick leave, on paid holiday, or who work during only part of the specified pay period. A striking worker who only works a small portion of the survey period, and is paid, would be included as employed under the CES definitions. Persons on the payroll of more than one establishment are counted in each establishment. Data exclude proprietors, self-employed, unpaid family or volunteer workers, farm workers, and domestic workers. Persons on layoff the entire pay period, on leave without pay, on strike for the entire period or who have not yet reported for work are not counted as employed. Government employment covers only civilian workers.

Note to Our Readers

The Department of Employment Services' Office of Labor Market Research & Information (OLMRI) collects the majority of the labor market information presented in this report on a monthly basis, as an agent for the United States Department of Labor, Bureau of Labor Statistics (BLS). Information presented is derived from BLS labor force models, Current Population Survey (CPS), Local Area Unemployment Statistics (LAUS), or the Current Employment Statistics (CES) survey.

The CPS measures levels of employment and unemployment through a citywide monthly survey of approximately 660 households. This survey collects information on the employment status of each member of these households, 16 years of age and over. Members of these households who are working at more than one job are counted as employed only once. The data reflect the county where the person lives.

The Labor Market Trends Newsletter is a monthly publication of the D.C. Department of Employment Services' Office of Labor Market Research and Information (OLMRI).

For inquiries/comments/suggestions, please call (202) 671-1633.

The Department of Employment Services is an Equal Opportunity Employer/Provider.
Auxiliary aids and services are available upon request to persons with disabilities.
