Introductions & Quorum

Minutes from last meeting

News and Notes

ESRI Enterprise License

- Base year plus 2 option years
- Almost all products, all you can eat,
- Network license pool
- Includes support, user conference, etc.
- Price we have a handshake deal
- Terms and Conditions we have a handshake deal
- Handshakes don't matter, No contract yet.

Survey and Mapping IDIQ

- 40 proposals, very competitive teams
- \$950,000 per firm per year capacity
- 2 months behind, but close to award
- 3 subject areas, 6 firms selected 2 firms in each subject area:
 - Photogrammetric Survey and LIDAR
 - Terrestrial Survey
 - Quality Control and GIS Technical Services

Citrix Upgrade

- Badly needed and badly overdue
- Will include
 - ArcGIS 9.3.1 soon ArcGIS X
 - Google Sketch-up
 - Use of local drives and printers
 - Use of DC.gov accounts
- Will require
 - Registration process with ITServus so each account can be added to the DC GIS domain.
- We need volunteers to try it
 - See Alex Salvatierra at this meeting

Blackberry GPS

- Data collection
- Workforce Tracking
- Create 311 Requests
- Vary small maps

Pictometry Self-Hosted

- New API
- No accounts

DC GIS Summer Youth Program

- 10 high school and college age students
- 5 professional grade GPS receivers
- 10 weeks
- DC GIS Staff Provide Supervision
- WE NEED PROJECTS!
 - POINT DATA COLLECTION
 - SIMPLE GIS TASKS

Training Class Schedule FY10

- May
 - ~~Overview 05/04~~
 - ~~Google (Earth) DC 05/12~~
 - ArcGIS 05/18 to 05/20
- June
 - Overview 06/02
 - Google (Earth) DC 06/09
 - ArcGIS 06/15 to 06/17
- July
 - Overview 07/07
 - Google (Earth) DC 07/14
 - ArcGIS 07/20 to 07/22
- August
 - Overview 08/03
 - Google (Earth) DC 08/11
 - ArcGIS 08/17 to 08/19
- September
 - Overview 09/01
 - Google (Earth) DC 09/08
 - ArcGIS 09/14 to 09/16

New OCTO Web Site

Alex Salvatierra

<http://OCTO.dc.gov>

Data Report
Mario Field

Updated Datasets

- **Aerial Photography – USDA NAIP (1 meter)**
- **Business Improvement District**
- **Curb Line**
- **Fire Battalion Area**
- **Grocery Store**
- **Impervious Surface 2008**
- **Library**
- **Liquor License**
- **Notary Public**
- **Retail Site**
- **Single Member District – new contact info**
- **Signalized Intersection**
- **Small Area Plans**
- **Street Light**
- **Street Tree**
- **Topography – 10 foot contour**
- **Topography – 20 foot contour**
- **University Point and Area**
- **CAMA**
- **Street Centerlines**
- **Owner and Sale Pt**
- **Vector Property Map**
- **Zoning**

Next Update

- **Abandoned Vehicle Inspection Area**
- **Camera**
- **DC Agency**
- **Fire Station**
- **Federal Building (GSA)**
- **Nursing Home**
- **Recreation Facility**
- **Recreation Park**
- **Retail Site**
- **Street Tree**
- **Zoning**

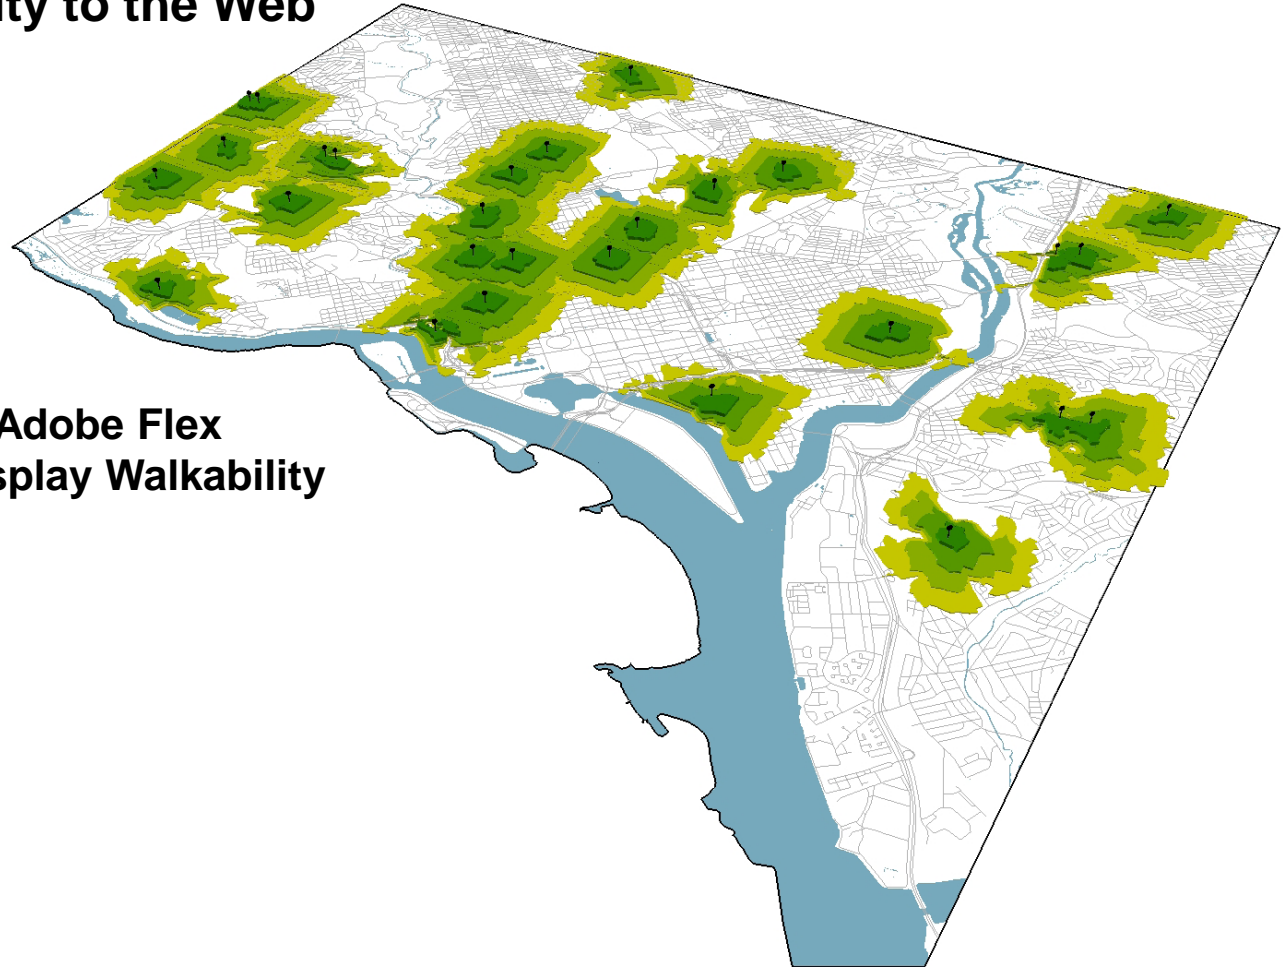

2010 Photography

Taking Walkability to the Web

Using ArcGIS and Adobe Flex
To Analyze and Display Walkability
Analyses

James K. Graham
GIS Specialist

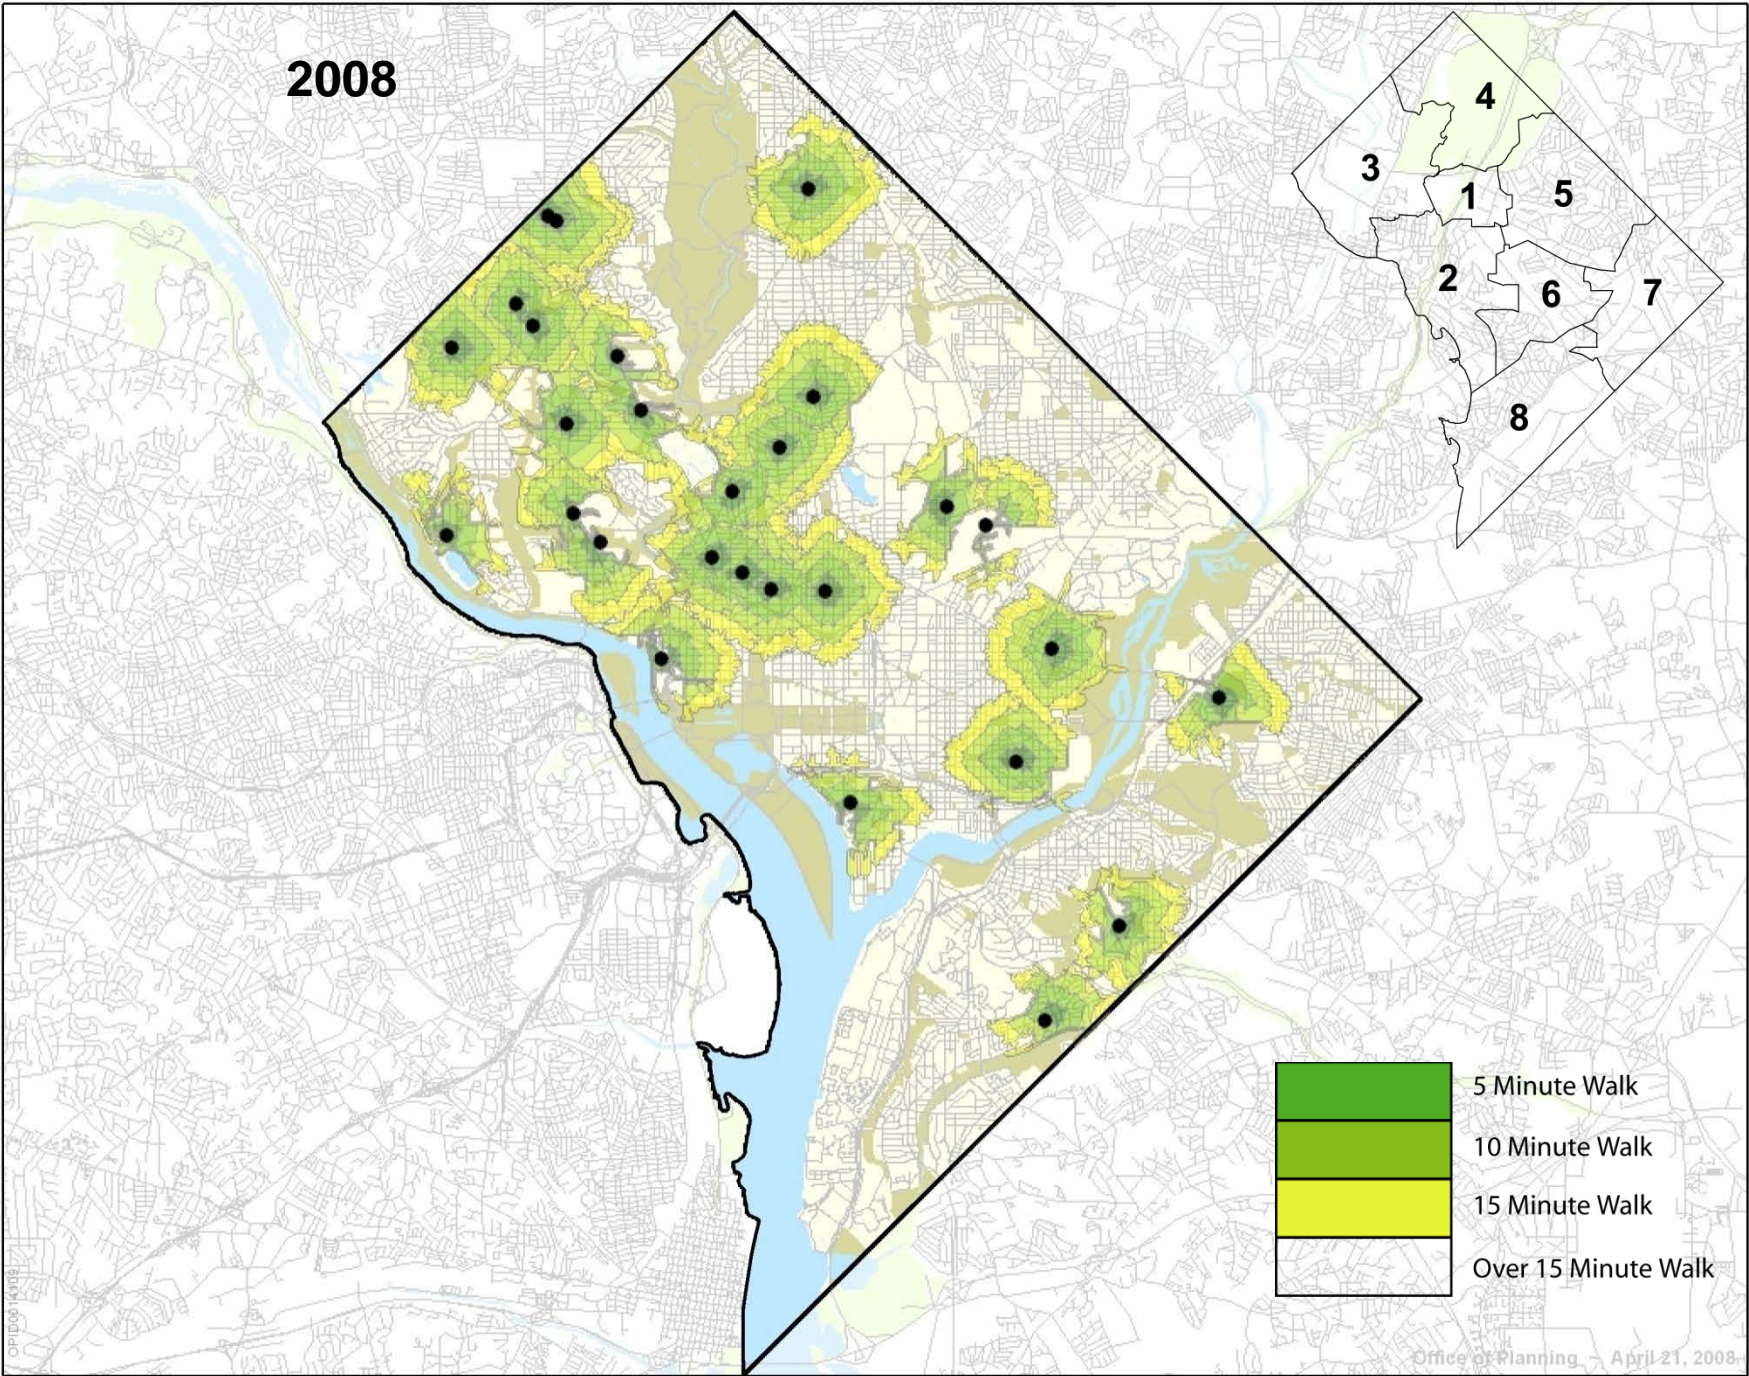

- How we got here
- Where we are now
- Where we want to be next

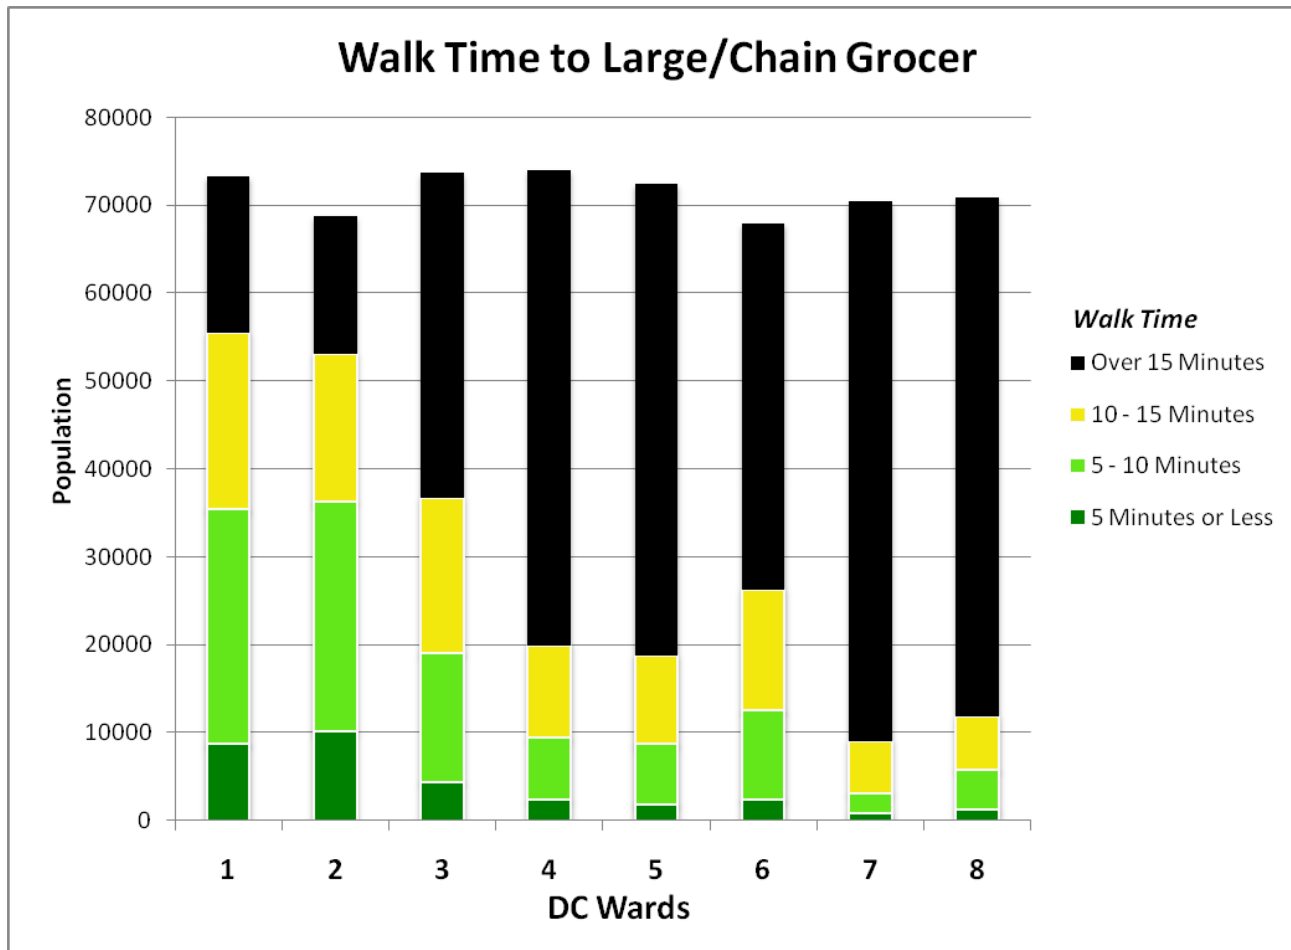

- 2008 APA (Grocery Store Walkable Accessibility)
 - Identified shortcomings of existing ‘walkability’ metrics
 - Demonstrated results of network-based walkability analysis
 - Showed spatio-historic patterns of access in DC.

2008

2008

- Drawing Board:
 - Need more data
 - Expand theme (Active Living / Healthy Lifestyle)
 - Tool to allow for constituent interaction (Active Living Index)
- Inspirations:
 - Walk Score (of course)
 - Walkshed (new raster-based approach)

- 2009 Prototype: “DC Walkscape”

- Built using...

<http://walk.dc.gov>

- ArcGIS Desktop
 - Adobe Flex (now called Flash Builder)
 - ArcGIS Server

- Functions...

- Enter address / click map
 - Get a point
 - Draw 15-minute walk time polygon
 - Show ‘Healthy’ locations inside polygon

- 2009 Prototype: “DC Walkscape”
 - Great, *but...*
 - Limited functionality
 - No custom geoprocessing tasks
 - Only 1 dataset (healthy locations)
 - Only 1 mode (walking)

- 2010 DC Walkscape... 2nd Edition
 - Goals for improvement
 - Richer user experience (more data, user control)
 - User-driven analyses (location + theme)
 - Modular
 - Go Beyond Google and WalkScore
 - Create rich, highly **local** data layers to query
 - Expose high-level GIS functionality

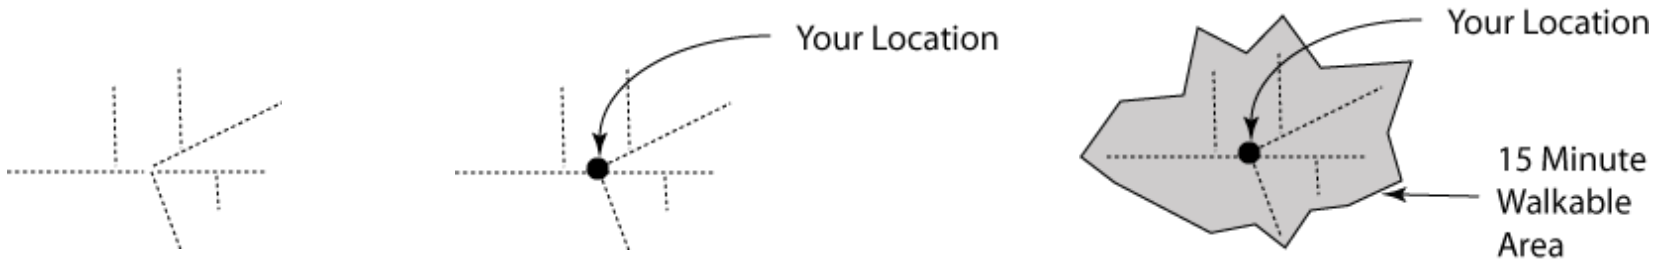

- 2010 DC Walkscape... 2nd Edition
 - Improvements:
 - Multimodal transportation network
 - 6 geoprocessing (GP) tasks
 - All data produced by DC Office of Planning
 - Dynamic Flex Web map
 - User-oriented

Startup Map and Search

- Uses MAR to Find Location
- Uses OP's GIS Trans Network to draw 15 min. walk time

USING OUR NEW MULTIMODAL NETWORK

- Currently have 4 modes
- More on the way!

Walk

Rail

Bus

Circulator

THEMATIC ANALYSIS

- Currently have three themes
- Uses network analysis to estimate walk time for each location
- Compares your closest location against DC Average walk time.

Select a Map Theme

CHANGING THEME TO 'FITNESS'

- Reuse existing walk polygon
- Examine Recreation, Community Centers and Fitness Clubs
- Also examine Park Areas, estimating acreage.

Select a Map Theme

FITNESS

Recreation / Fitness

Parks / Open Space

Walktime

	YOU...	DC Avg...
R Recreation Facility	0 5 10 15 20 25	
F Fitness / Gym		

Acres

	YOU...	DC Avg...
P Parks	0 50 100 150 200	

CHANGING THEME TO 'HEALTHCARE'

- Reuses existing walk polygon
- Examine public health availability (low / no cost)
- Also analyze health insurance availability (user-defined).

Select a Map Theme

HEALTHCARE

Public

Private Insurance

Walktime

			0	5	10	15	20	25
P	Healthcare (public)	YOU...						
		DC Avg...						
I	Healthcare* (*requires insurance)	YOU...						
		DC Avg...						N/A

Insurance: **Aetna**

Doctors within this walk area: **—**

- 2010 DC Walkscape... next steps:
 - Even *more data!*
 - Incorporate additional modes
 - Bike
 - Allow user to set walk time
 - Better printing + ‘send this map’ capabilities.
 - Create “Planner Edition”
 - More advanced tools
 - Edit add location functionality
 - Export results (as GIS or table)
 - Crowd-sourcing data collection?

Conclusion

Questions?

James K. Graham

202-442-4161

jkgraham@dc.gov

New Map and Data Services

Matt Crossett

DC GIS Publishes Data Categories as Map Services

What is a Map Service?

- ◆ A Map Service or Web Map Service (WMS) is a protocol for serving georeferenced map images over the Internet that are generated by a map server using data from a GIS database.

What has DC GIS Published?

- ◆ Over 300+ layer via “our” 19 Categories (Ex. Administrative & Other Boundaries, Education, Location, Recreation) Plus many “one-offs” for custom applications including 2008/2007 Orthos

What does this mean for me?

- ◆ Desktop Users outside DC Gov.
- ◆ Desktop Users within DC Gov.
- ◆ Web Developers outside DC Gov.
- ◆ Web Developers with DC Gov.
- ◆ OCTO GIS

DC GIS Publishes Data Categories as Map Services

Pro's

- ◆ Developers can now access our data directly as map services (Map Service, WMS and KML)
- ◆ You can control labels on/off in map service
- ◆ You can use the Identify/Find tools to query ArcGIS Server map service layers.
- ◆ Ability to cache (increased performance) certain static map services – ex. Background imagery
- ◆ Can customize which layers are “on” from category map service and save a local layer file and into MXD.
- ◆ Real-time access to our latest data, this should decrease the number of data dvd's we create for external customers.

Con's

- ◆ The label symbology/scale dependencies are fixed (only minor customization allowed).
- ◆ Each layer is not a individual map service - they are served up as “our” categories.

DC GIS Publishes Data Categories as Map Services

Connecting to DC GIS Map Services

- ◆ To use DC GIS Map Services in ArcGIS Desktop, connect via ArcCatalog:
Add ArcGIS Server URL: <http://maps.dcgis.dc.gov/dcgis/services>
Folder: \DCGIS_DATA
- ◆ From Browser: http://maps.dcgis.dc.gov/DCGIS/rest/services/DCGIS_DATA
- ◆ Add WMS Server URL:
http://maps.dcgis.dc.gov/DCGIS/services/DCGIS_DATA/Administrative_Other_Boundaries/MapServer/WMSServer
- ◆ Information available here:
<http://octo.dc.gov/DC/OCTO/Agency+Support/Development,+Training+and+Support/Develop+Websites+Using+GIS+Web+Services>
- ◆ <http://maps.dcgis.dc.gov/propertywebservice/>
Source - VPM Layers, Condo Relate table and MAR

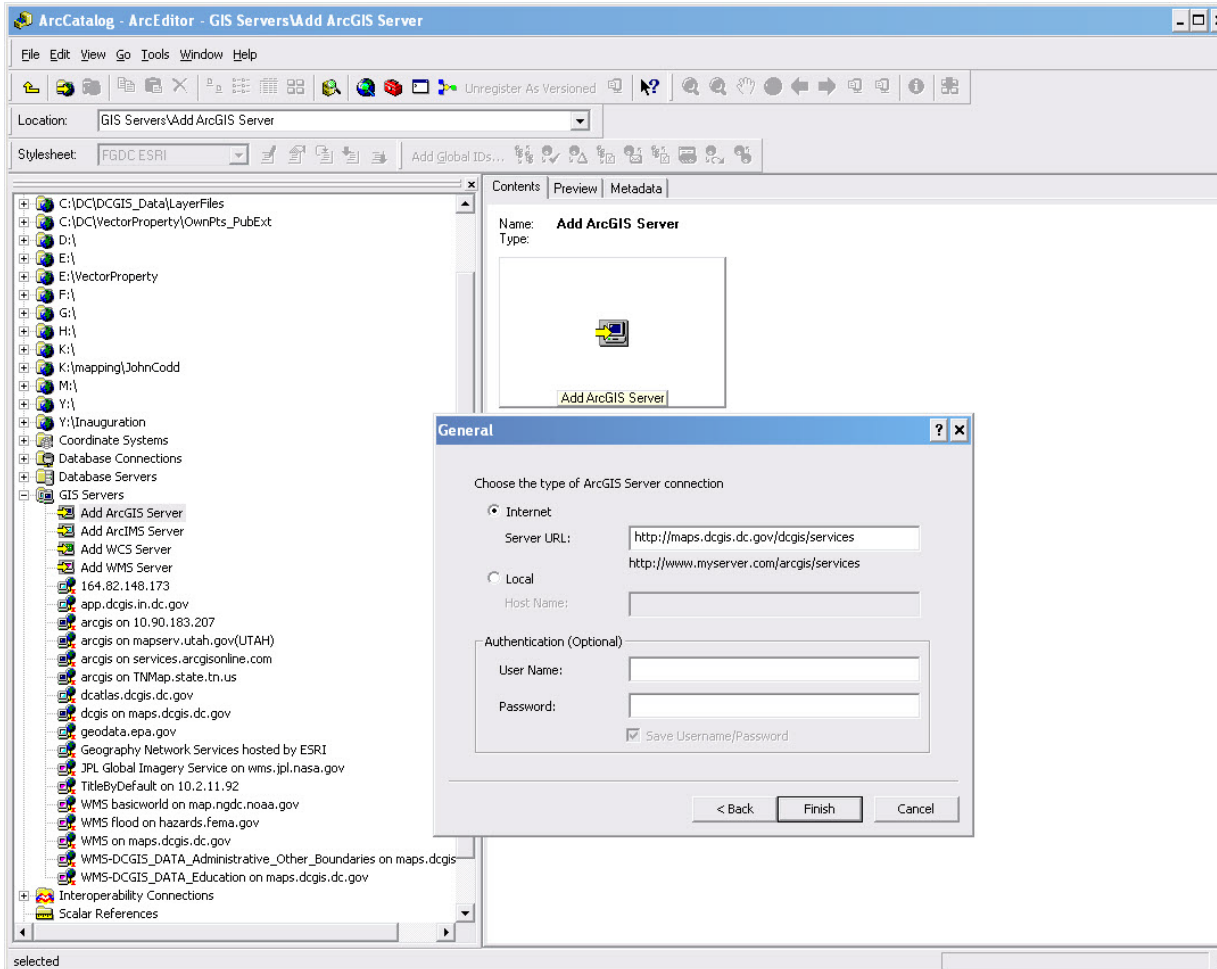

DC GIS Publishes Data Categories as Map Services

Demo

New Property Web Data Services

How you can find it (inputs)

- Find by Address
- Find by X,Y
- Find by Parcel Lot
- Find by Square Suffix
- Find by Square Suffix Lot
- Find by Parcel Lot By Parcel
- Find by Reservation
- Find by Suffix By Square

What you can find (outputs)

- Addresses
- Air Rights Lots
- Condos
- Tax Lots
- Parcel Lots
- Record Lots

National Geospatial-Intelligence Agency (NGA) LIDAR

Barney Krucoff
District of Columbia
GIS Manager
Barney.Krucoff@dc.gov

Basic Facts

- Resolution: 1 meter
- Collection method: Airborne
- Coverage: National Capital Region
- Date and derived products
 - Reflective Surface
 - Intensity
 - Last Return
 - Bare Earth Model
 - Extracted Features/Shapefiles (Buildings 2D/3D, Trees, Forests)
- Matches well with DC GIS Topography

Use Constraints

- 3D buildings are For Official Use Only
- No other constraints provided

Coverage 24 Tiles

Tile 16 Reflective Surface

Tile 16 Last Return

Tile 16 Intensity

Tile 16 Bare Earth

Reflective Surface 1:2400

Bare Earth 1:2400

Buildings Downtown 2D

Buildings Comparison 1:2400 (LIDAR derived over DC Stereo derived)

Trees 7 Building over DC Streets 1:2400

How DC might use data

- Impervious surface refinements
- View shed analysis
- Change detection
- Tree canopy
- More...
